

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
262	05/09/2024	1	When running setup from the GL Settings screen for MYOB AR Cloud, the Authentication screen fails to load displaying a 'Can't Reach This Page' error message.	This was caused by MYOB changing their authentication routine for Desktop applications (eg: Ostendo) without notice. We have modified our internal authentication process to workaround this MYOB change. Once MYOB have resolved this problem and reverted back to their original method for Desktop Applications, this new build will still function correctly.
260	27/06/2024	1	POS - Currently possible for a POS order to receive a Payment and then when changed to an invoice amend the POS Payment Style to On Account. This removes the POS payment and leaves the Payment in Ostendo	Prevention added to POS Payment screen that prevents the Style being changed.
259	26/06/2024	1	The Assembly Issues screen is slow to draw the screen when the Pre-fill is selected to display lines from an assembly order. (anything with more that 20 lines)	Resolved
		2	Default Task not defaulting correctly when new job line is added in a database where the sysuniqueid is a negative value.	Resolved
258	13/06/2024	1	Conditioning logic introduced to check for existence of specific records relating to future development of new tables	Resolved
257		1	New Job Order and New Job Task User Security options being ignored if not selected.	Both Options are now evaluated for the user if they attempt to create a New Job from the Job Orders Screen or a New Task from the Job Tasks Screen. This enables the user to launch either screen, however controls whether they can create a new job or task.
		2	Allow a User Defined Constant PivotExcelHeadings (Yes/No) to be used to control whether Row Field names are output to Excel from a Pivot Table. Some sites wish to show these headings in Excel however by allowing this, the output software component used by Ostendo automatically inserts some rows and column which may cause formatting issues.	We have provided a User Defined Constant that allows for a global setting to output Row headings to Excel if the Constant is set to 'Yes'. If the constant is not defined or is set to 'No' then those rows heading are 'not' output to Excel. This is the default behaviour. This Build enhances this modification from Build 253

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
257	13/06/2024	3	When creating a job from a Job Template that contains multiple Custom Items, the Sell price of the first item is being used by default for all other Custom Item Job Lines created from that Template.	Resolved
254	04/06/2024	1	Refreshing performance problem when cancelling out of the Create Job Order screen.	This was due to a volume issue over the Job Task Table (over 1m records), whereby the software component was not efficiently releasing the records upon Cancel. - Resolved
253	02/05/2024	1	Problem displaying the GL Setting screen when display monitor has been scaled greater than 100%	Resolved
		2	Data Headings from Pivot screen output not saved when output to spreadsheet.	Resolved
252	26/04/2024	1	POS Rule "Allow application of payment' being ignored and always displaying message asking to apply the payment.	POS now checks this POS Rule before displaying this message
251	26/03/2024	1	Screen Preview of Reports only generates to 100%. This becomes a problem when viewed on a high resolution monitor scaled much larger eg: 250%	Screen Preview now automatically scales at 'Whole Page' setting rather than 100%
250	14/03/2024	1	Labour Capability screen not behaving correctly.	Resolved
249	27/02/2024	1	Further work on UFT8 Unicode issue after feedback	Resolved
248	16/02/2024	1	UFT8 Unicode scripting function not working correctly. Was ok in Update 238	Resolved
		2	Queue Schedule not evaluating Company Level of report first when running an report via the Queue Schedule.	Company Level now evaluated first and then System Level if no Company Level exists.

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
247	05/02/2024	1	Purchase Shipment Tracking Lookup including InActive Tracking Statuses	Resolved
		2	Batch Cost Update includes obsolete Items	The program now only generates batch cost update lines for all items other than Obsolete. Previously the database generated all lines and then automatically deleted obsolete items. This meant the user would have to refresh the screen immediately after generating the Batch
		3	Error message is displayed when Container Tracking set to use Colour when attempting to issue / Receipt items via Batch Assembly Issues, Job Issues, and Job Transactions screens	Resolved
		4	Assignment Board Enhancement Request - no shortcut available to scroll board either to the left or right.	Scroll Left = Hold Shift down and scroll down Scroll Right = Hold Shift down and scroll up
		5	Currently no scripting function available for refreshing the Assignment Board using an Order Script	New scripting function added: RefreshAssignmentBoard
		6	Screen Conditions and Lookups behaving inconsistently when some lookups are defined as there can be multiple lookups for the same table eg: JobHeader.	The screen conditions definition screen has been re-designed to allow for either Add a Lookup by Index, or Add Lookup by Tablename or Condition by screen name
		7	Enhanced Request to include Current Reading and Reading date against Job Information in the Customer Asset Planning & History Grid screen	Resolved
		8	Where Used Inquiry - Users with restricted access to the BOM screen are able to access this screen by using the Go To BOM Screen option (right click)	User Security permissions are checked first now before making this option available to the user.

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
247	05/02/2024	9	Customer Statistics Screen performance. Ostendo slow to show Invoice and Payment / Deposit history when customer has large volumes of transactions.	Customer Statistics screen now checks the System Settings - Dynamic Archive days setting in order to display Invoice, Customer Payments / Deposit History from this screen.
		10	AskMandatoryQuestion currently forces the user to press the 'Answer' button rather than 'Enter' (as in Update 238)	Scripting function now changed to allow the user to press the Enter button after answering the question.
		11	Direct Invoice screen re-calculated Nett Line Price and Line Tax after the user amended the Unit Price Incl value. This worked when invoice created from Direct Invoicing screen, but not in the Batch Invoicing screen.	Resolved
		12	Fixed Price Currency Symbol on Job Detail screen not displaying correctly if a System Settings Override Currency Symbol is defined.	Resolved
		13	Inconsistent logic when determining Payment Method on Pay Now button, Order Deposit Creation, Deposit Creation and Customer Payments.	These screens will now apply the following logic to determine the default Payment Method for the transaction: 1) Apply Customer Default Payment Method if one exists for that Customer, else 2) Apply the Default Sales Rules Payment Method NB: The Banking method is tied to the Payment Method, therefore the option to modify the Banking Method on these transactions has been removed.
239	12/12/2023	1	Screen Data scripts for JOBHEADER and BOMLINES screens not behaving correctly under some circumstances when an abort function has been invoked causing the script not to run correctly when the script is re-run.	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
238	26/10/2023	2	When a Customer Payment is fully applied you are always returned to the previous payment in Payment List Grid (if Include fully applied turned on)	Screen behaviour modified to now return to the last record in the List Grid whether Include fully applied turned on or off
	25/10/2023	1	When a new deposit is entered and saved, the screen stays on the Detail Tab however the last record in the List grid is displayed.	Modify screen behaviour of Customer Deposits screen so that it remains on the record when the Deposit is saved.
237	17/10/2023	1	Job Invoices screen (From Schedule type jobs) not allowing the user to edit data on some fields prior to initially saving the record.	Change to Job Invoices screen to allow the user to edit Plan Value, Plan %, Actual Date, Fixed Cost Value (if Invoice Cost Style = Fixed Amount / Fixed Act Percent or Fixed Plan Percent) before the initial save after a new record is created for 'From Schedule' type jobs only.
235	06/09/2023	1	Further work around Job Invoices screen to allow the Actual Invoice Date to be amended on an Invoice with a Status of 'Not Printed'	
233	05/09/2023	1	When importing data into Ostendo from a csv file, the Sysuniqueid field was not available. Currently available only for importing from xls or xlsx files.	Now includes Sysuniqueid field in Mapping fields
232	31/08/2023	1	<p>This Build can now use environment variable paths in the Document Master eg. %OneDrive%\MyFies\Myfile.txt</p> <p>Also included:</p> <ul style="list-style-type: none"> - Associated docs for Orders etc, if they are set as a url eg. have http at the beginning, then when emailed are now added to email body as hyperlinks (using the document name as the link text) - A new Script Function ResolvePath has been added so if you wanted to read a file path from documentmaster and it is using a variable (%xxxxx%) or uses {AppPath} this function will resolve that to the actual path 	

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
230	21/08/2023	1	Problem found in Build 227 preventing the creation of Invoices from the Job Invoices screen for Actual Entries Invoice Style Jobs.	Resolved
229	09/08/2023	1	Problem with the SSGetCellText function causing scripting to error with an Access Violation error	Resolved
228	04/08/2023	1	Change of behaviour when records are saved in Edit Views. Currently in 242 user needs to save record prior to pressing the arrow down key. 238 auto saved record when arrow key was used.	Record is now saved when arrow key is pressed to advance to a new Line Record.
227	02/08/2023	1	Customer Deposit screen saving over data when open at the same time as a Customer Payment generated for it. Upon closing this screen would re-save the Unapplied amount on the Deosit itself resulting in a fully allocated deposit showing with a Status of Received.	Customer Deposit Screen amended to not auto save upon exit
		2	Mass Replacement screen only displaying first 100 characters of the Parent Description.	This screen now displays 255 characters of the Parent Description
		3	Job Invoices screen able to generate two invoices for the same Planned Schedule if Job Invoices was open in two sessions.	Validation built into this screen now to check for existence of invoice number for a Planned before generating another. Also user now prevented from amending any job invoice schedule plan information when second session open and not refreshed.
		4	Screen Data Script over the Assembly Orders screen not responding correctly to the abort function from scripting.	Resolved
224	12/06/2023	1	Scripting for spreadsheet handling problem. SSGetCellText is treating date format cells	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
224	12/06/2023	2	Archive Viewer - the print Dialog box is displayed with a default number of copies of 1000	Default number of copiers reset to 1
		3	Document Management screen now allows for conditioning for Freeway. (Minor Update 133) - All Mobility (Document is available to Freeway) - No Mobility (Document is not available to Freeway) Refer Article: https://mailchi.mp/development-x.com/new-freeway-functionality	
222	12/05/2023	1	Labour Capabilities entries not being auto saved when exiting the Labour Capabilities Maintenance screen	Resolved
221	10/05/2023	1	When re-opening a Closed Assembly Order, all lines remain in a Closed status. This means that when a Backflush is triggered from receipting, no issues are performed against those closed lines.	Upon changing an Assembly Order Status back from Closed to any other status the user is now prompted if they would like all lines to be re-opened.
220	31/03/2023	1	Task Description field added to the Purchase Line Allocations screen. This enhancement refers to Minor Update 118	
219	27/03/2023	1	Price rounding rules not being evaluated when Item / Descriptor Qty Breaks are defined.	Resolved
217	07/03/2023	1	If Ostendo was closed down whilst an inquiry screen was active, the program would either display an Access Violation or would hang.	Resolved
216	27/01/2023	1	Scripting engine in 242 not immediately committing a select stmt when using ExecQuery in a script	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
215	25/01/2023	1	When Item Pricing has nearest rounding amount set to 0.0001 and the sell price is set to Greater Than \$1,000,000 the sales order price was not being set correctly.	Resolved
213	18/01/2023	1	Emailed PDF's are not rendering with Images when the SystemMaster.OLDPDFEXPORT is set to True.	Resolved
		2	SDS over Job Transactions Screen locking up screen if the abort comand initiated within the Sreen Data Script.	Resolved
		3	Additional Field values are not copied to new order when a Job Copy is performed.	Resolved
211	07/12/2022	1	DataSet no in Edit or Insert error message displayed when attempting to record an Actual Issue against a Taskbill within the Job Lines Screen	Resolved
209	04/11/2022	1	Amendment to GL Settings Setup routine when configuring for MYOB AR Live. MYOB Version 2022.8 now requires Microsoft Edge to exist on the PC this routine is being run from.	This routine now uses Microsoft Edge browser to conform to MYOB 2022.8 version.
206	05/10/2022	1	Pricing Rules around Rounding and to the Nearest were not be interprttd. Instead Rounding Standard was always being used despite of this setting. This affected rounding on Item / Descriptor Pricing screen along with Batch Price Update	Resolved
203	07/09/2022	1	Rounding issue when displaying some multi decimal qty's in the Assembly Orders Lines screen	Qty decimals are now rounded to 6 decimals
		2	Speed Entry record being corrupted when Item Lookup used within a transaction.	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
200	01/08/2022	1	The Created Required Orders screen generated from the Order was not holding the order condition after it had completed the first pass of the routine.	Resolved
199	25/07/2022	1	Auto creation of Windows Folder not occurring when PO was generated from a Job or Assembly Order	Resolved
		2	Edit View Procedure DetailValidate not fired when View set to Detail Style	Resolved
		3	IE11 was attempted to be used when running Mobility Employee Locations resulting in the map screen not generating	Microsoft Edge Browser now used instead. Also a new dll (WebView2Loader_x86.dll) included in the Ostendo folder
196	07/07/2022	1	Item Costing (& Item Site Costing) displaying cost change records in ascending sequence, means the user is required to scroll down to see the latest records.	These screens now display cost change records in cost change date descending sequence.
195	23/06/2022	1	When Colour attribute is set for Container Tracking, this label was not being swapped out for the wording 'Container' in the Item Transactions History screen	Resolved
193	14/06/2022	1	Various amendments to enable Report Layouts to be stored within the Ostendo database. This work is in preparation to Ostendo connecting via HTTPS	
192	11/06/2022	1	Projected Availability on the Inventory Availability screen not taking into account Assembly Issues with Negative Order Qty's as a result of using BOM Features and Options	Resolved
		2	Service Confirmation text fields limited to CustAssetSchedule table	Enhanced to now make available all fields from the following tables: CustomerAssetMaster CustAssetSchedule CustomerMaster

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
191	10/06/2022	1	Modify BOM Lines and BOM Tree screen to allow qty's of 5 decimals to display correctly. Currently they are displayed as a scientific format.	
190	08/06/2022	1	This exe is released in conjunction with Minor Update 59. Amendment to the timed precheck posting process to external accounting software. This will reduce the number of calls made to the accounting software to reduce the possibility of API Call limits (Xero) being breached.	
		2	Error message being displayed from within the Report Writer. Error Message: SQL Error GET_REPORTLAYOUTS	
188	07/06/2022	1	AO Lines not displaying 5 decimals correctly. This also includes Actual qty's	AO lines Screen now changed to show up to 5 decimals correctly for Order and Actual Qtys
		2	Further work to resolve screen display issues when displaying Ostendo after switching from a 200% scaled monitor to a 100% scaled monitor. Against vairous field heading fonts to auto resize in this situation.	Resolved
		3	Move the Instructions tabs for Jobs and Sales Orders to appear at the top of the Instruction screen rather than down the side. This will aid users with older style monitors configrued with a resolution of 1366 x 768	
185	23/05/2022	1	When an AO with Sub Assemblies was created from Create Required Orders Option within SO and Jobs, the lower level assemblies are not generating AO's when the Explode All or Explode Source on Demand option is also taken	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
185	23/05/2022	2	Workflows and some Ostendo screens not displaying correctly when launched on a monitor scaled at 200% and then moved to another monitor set at 100%. Also some Related Toolbar buttons were being sized incorrectly in this environment.	Resolved
182	09/05/2022	1	Receipt Qty and Receipt Unit Price fields in the upper grid in the Purchase Shipment Lines tab are still accessible from Closed Purchase Shipments.	These fields are now read only after the Shipment is Closed
		2	Only the Parent Item Code is being displayed at the top of the BOM Lines Screen. Would be useful to include the Parent Description	Parent Description now included at the top of the BOM Lines screen
181	06/05/2022	1	Workflow sizing problem when multiple monitors are in use with different scaling percentages. Problem showed up when the workflow was slide to another monitor of different scaling.	Resolved
180	19/04/2022	1	Workflow Fonts resizing on 242 when after editing the Workflow under a display scaling of above 100%	Resolved
179	11/04/2022	1	Assignment Board Resource sequence and Layout being reset when user applies a Filter on the Assignment Board.	
176	01/04/2022	1	ExportData in scripting when setting type to XLSX was not working	
		2	Provide the ability to run a System Action type script from the Job Invoices screen	
175	31/03/2022	1	Occasion problem where Some items not appearing from Create Required Assembly Orders (from within Assembly Order screen)	

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
173	25/03/2022	1	Mobility Screen Layout sub screen remaining active when that screen was closed done. This is seen when hovering over the Ostendo icon when the application is running.	Resolved
		2	No splitter bar on both Sales Order and Purchase Order Lines screens to enable the user to increase the field size of the Line Notes field in the manner as the Job Lines screen	Enhancement
		3	Both Job Lookups in the Job Transactions screen include Quotes even if the Job Rule for posting to quotes is turned off. Amend these lookups to evaluate this rule first.	Resolved
		4	When a Filter is turned on and then turned off within the Assignment Board, any Resource Editor Sequence changes revert back to prior layout	Resolved
		5	PO Default Allocation Type. Prevent the user from using the Batch Entry buttons on the PO Lines screen if a Default Allocation Type of Assembly or Job has been set on the PO Detail Screen.	Resolved
		6	POS lines are now auto sorted based on the Line numbers. The screen re-sorts these if the user edits a line number	Resolved
		7	Add new field 'Last Statement Date' to the Customer Stmt Grid to provide the user with further information	Resolved
		8	Line Line Source Qtys not allowing split of qty's in descending qty sequence, only in ascending seq.	Resolved
172	24/03/2022	1	POS - Prevent the user from using the Batch Entry buttons unless the POS sale has a PO entered where the customer is set to PO Mandatory	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
172	24/03/2022	2	Datasheets Grid not holding user grid settings	Resolved
170	15/03/2022	1	Dataset Error message when user attempts to overwrite Suggested Order Qty.	Resolved
		2	CSV Exports from Ostendo Grids not opening up in a comma delimited form	Resolved
		3	Access Violation error sometimes when closing down Containers Screen	Problem associated with record not being saved prior to printing the Container Label
		4	No Preview parameter in the OstendoReport function when called from within an Edit View script	Resolved
163	23/02/2022	1	To Container Lookup for Job Lines and Delivery lines should only display Container Style = Delivery Contents	Resolved
159	11/02/2022	1	Error message being displayed when attempting to generated Batch Price Update Lines when Descriptors are selected from Detail screen	Resolved
158	27/01/2022	1	No column summing or averaging functionality in the Inventory Transactions screen along with no Group Footers or Grouping.	Resolved
157	22/12/2021	1	Tile layout being altered if a Tile was renamed. Random moving of tiles when minor tile changes were performed	Resolved
156	20/12/2021	1	Inventory Adjustments screen no allowing the entry of multiple decimals in Unit Cost	Resolved
155	07/12/2021	1	Unable to change and save the default line sort order in the Job Lines screen	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
155	07/12/2021	2	Default active button in Print Dialog window set to Cancel. This should default to OK	Resolved
		3	Amendment to scripting engine for Edit View Script function on Before Post	Resolved
152	16/11/2021	1	The Datasheet screen now enables users to use the Scripting SetScreenParamter function to 'Go To' that screen to display linked records using SetScreenParameter('INCLUDECLOSEDUPDATED=true'); //can be (True / 1) or (False / 0) any case	
151	15/11/2021	1	Descriptor and Item Pricing screen freezing when Round to Nearest value selected	
149	01/11/2021	1	Enhancement to Assignment Board to allow the user to turn on a switch to control Job List based on the Calendar Day selected matching to the Required date of the Job	
148	26/10/2021	1	Create Required Orders - When combining multiple demands together into one AO, the Job / Sales Lines Source Reference (PurchaseOrderNumber) was not being updated and if the Job line was in any way updated, that would generated a new requirement. This Line Source Field now updated with the word 'Combined'. Also the resulting AO Source Reference was not always showing 'Various'.	
147	21/10/2021	1	Print Dialog screen being clipped on monitors set with scaling other than 100%	
146	20/10/2021	1	Ostendo not printing on secondary monitors set with differing display Scales	

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
141	07/10/2021	1	Unable to restore saved Pivot Layouts where there was a field name with an underscore in it. Eg: ADDITIONALFIELD_1 This is not a problem if an alias is used without an underscore.	Resolved
		2	Main Screen Related shortcut buttons not saving when Workflows are in use. Upon exit and re-opening Ostendo these buttons disappear.	Resolved
		3	Include ability to sort Discount Matrix screen coloums	Enhancement
138	28/09/2021	1	A fix to a problem when attempting to launch an email client other than Outlook. It only worked correctly in the past because of earlier Windows Server OS.	Resolved
137	13/09/2021	1	Allow Item Batches screen to be minimised	Enhancement
		2	Allow Related Scripts to be linked to the Assembly Receipts screen	Enhancement
134	08/09/2021	1	Further problem identified with the Available items sub screen displaying <empty> when AddLinesGrdtoCustomEntry added to a Custom Screen Script	Resolved
133	06/09/2021	1	Problem with Custom Screens not displaying fields correctly to the Available Items view in the Customize sub screen	Resolved
132	01/09/2021	1	Job Line Instructions headings for Job and Invoice Notes not being displayed correctly when certain skins are in use. (Native windows setting was ok)	Resolved
		2	Splitter bar setting on Job Lines screen not saving when screen height was adjusted.	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
132	01/09/2021	3	Preview Report Screen - Exporting Excel creates an xls file thereby causing security problems when it is opened	Only xlsx files will be exported now from Ostendo preview screen when Excel Export is selected.
130	25/08/2021	1	The Deselect button not working on Credit Lines Selection screen when Crediting an Invoice using Invoice as a Template option is taken	Resolved
129	24/08/2021	1	Problem with Qty Break Widget not displaying Qty Break pricing correctly. Was calculating Qty's Breaks based on Sales Line Price rather than Price Level price	Resolved
		2	Inventory Availability initially being launched into the Detail Tab	Resolved
		3	Inventory Availability list screen columns incorrect column width and not allowing save of width or sequence	Resolved
128	20/08/2021	1	Last printer used in a report being held in the Print Dialog screen for subsequent reports	Resolved
125	12/08/2021	1	Screens scaled to 175%+ not displaying Report Selection / Change Password / Login and GNC screens correctly	Resolved
119	27/07/2021	1	Problem with Saved Pivot Layouts not being available from the Restore option within the Pivot.	Resolved
		2	The Conditions tab in the Assignment Profile screen remains active in the background even the user moves back to the Assignment Profile List. If the Add button is pressed, on the List screen it adds further Conditions records.	Resolved
		3	Able to save an Assignment Profile record without specifying a Profile Name	Resolved

Ostendo Executable Build Log (Update 242)

Database Version: 242

Build No	Date Published	Amendment Number	Problem Determined / Resolved	Resolution
116	09/07/2021	1	Include the Order and Billing Customer Mobile numbers on the POS Customer screen	Enhancement
112	06/07/2021	1	One of the Item Nutrition fields not being updated when the save button pressed	Resolved
111	05/07/2021	1	When switching users, the tile background image is not being reset for the new user and is carrying thru despite this user either using a different tile collection or none at all.	Resolved
110	02/07/2021	0	Initial Release
